Education

Harbin Institute of Technology Sep 2016 - (Jun 2018)
M.Sc in Computer Technology, School of Computer Science and Technology ◦ 2 years, Harbin, China

- GPA: 83.0/100 Rank: 2/186
- Research fields: natural language processing, knowledge graph, health informatics, machine learning
- Core courses: Algorithms, Machine learning, Data mining, Natural language processing, Knowledge engineering, Artificial intelligence, Deep learning for NLP

Harbin Institute of Technology Sep 2012 - Jun 2016
B.E. in Flight Vehicle Design and Engineering, School of Astronautics ◦ 4 years, Harbin, China

- GPA: 87.8/100 3.7/4.0 Major GPA: 93.1/100 4.0/4.0 Rank: 5/85

Professional Experience

Construction of Chinese medical knowledge base Sep 2017 - Now
Final year graduate project, Part II ◦ 3 months

- Acquiring knowledge automatically from medical texts, and integrating them as a medical knowledge base.
- Designing the descriptive schema of the knowledge base, as well as its corresponding storage, search and validation tools.

Entity classification based on its descriptive sentences May 2017 - Aug 2017
Internship at Knowledge Graph Group, Baidu Inc. ◦ 3 months

- Determined the category of arbitrary entities according to their descriptive sentences, with a text classification model.
- Designed a clustering module to filter the noise instances and alleviate the class imbalance problem.
- Applied this system to 2.1 million entities, and 1.1 million are successfully classified with a precision of 99.4%.

Concept association from user interest perspective Feb 2017 - Apr 2017
Internship at Knowledge Graph Group, Baidu Inc. ◦ 3 months

- Integrated the interests in user profiles as a network and then explored its structure by community detection.
- Labeled each interest community with relevant concepts, to depict the topics of interest at the concept level.

Knowledge representation and reasoning from Chinese electronic medical records Oct 2015 - Feb 2017
Final year graduate project, Part I ◦ 1.3 years

- Constructed a medical knowledge network containing the medical entities and entity relationships
- Regarded entities as random variables and modeled their relationships via Markov networks and Markov logic networks.
- Represented the medical entities as embeddings to depict their similarities, and then designed new energy functions for inference.

Error detection and correction of Chinese texts Nov 2016 - Dec 2016
With Zhongke Huilian Inc. ◦ 1 months

- Adopted n-gram language model with Kneser-Ney smoothing to detect and correct typos in Chinese texts.
- Corrected about 80% of the errors of test data, with only a small corpus (about 4M) to train the language model.

Removing of protected health information from psychiatric evaluation records Jun 2016 - Oct 2016
i2b2 2016 CEGS N-GRID De-identification Task, SUNY at Albany ◦ 4 months

- Implemented a de-identification system using the character-level bi-LSTM networks with enhanced word embeddings.
- Attained the F_1 measure of 0.899. The best score among the 15 participating teams was 0.914.

Construction of the knowledge graph on consumer-oriented consuming interest Mar 2016 - May 2016
With Ricoh Software Research Center Beijing Co.,Ltd. ◦ 3 months

- Analyzed the activities, similarities, importance, clustering, and purchase possibilities of the customers, according to the consumption behavior of each customer in e-commerce sites.

Biomedical literature retrieving for clinical question answering Jun 2015 - Aug 2015
2015 TREC Clinical Decision Support Track ◦ 2 months

- Retrieved the relevant medical literature of the given clinical records from 700, 000 articles via Lucene and Indri.
- Constructed a medical literature network and then identified the potentially relevant ones from the literature pool.

Skills

Language:	Chinese, English
Programming:	Python (Tensorflow, theano), Java, C, C++, Matlab, Shell
Others:	Git, Hadoop, LaTeX, HTML, Photoshop

Selected Awards

- Innovation Scholarship (Top 1% in China) Dec 2017
- National Scholarship for Graduate Students (Top 1% in China) Nov 2017
- Outstanding Graduate Award (Top 10% of all graduates in HIT) Jun 2016
- Outstanding Final Year Project Thesis (Top 10% of all graduates in HIT) Jun 2016
- Top-grade Scholarship (Top 1% of all students in HIT) Sep 2015
- First National Prize for China Undergraduate Mathematical Modeling (Top 1.5% in China) Sep 2015
- National Scholarship for Undergraduate Students (Top 1% in China) Sep 2014
